

Summary of the G/T Team Improvement Plan 2011-2012

The G/T program at FQMS has two main goals for school year 2011-2012: 1) To maintain its high percentages of student group participation in G/T content-area classes, and 2) to increase the number of students working on Research Investigations. We already match or exceed the county's average for percentage of students in G/T content-area classes in all student groups. The second goal, however, will allow our students to apply the skills and knowledge that they acquire in their content classes to independent research investigations that parallel their own interests and passions. Research investigations can be in any field or area, and students will work closely with the G/T Resource Teacher to produce work that will then be presented to an authentic audience. The research investigations can tie in directly with something that the students are studying in one of their classes, or they can reflect the students' interests outside of school.
